| Lesson 3 - Concentration as a Percent | 84 mins |

Solubility of Ionic Compounds

| Solubility Table (Data Booklet) |  |  |  |
| :---: | :---: | :---: | :---: |
|  | Ammonium sulphite | $\mathrm{NH}^{4+} \mathrm{SO}_{3}{ }^{2-}$ | $\left(\mathrm{NH}_{4}\right)_{2} \mathrm{SO}_{3}{ }^{-}$(aq) |
|  | Lithium fluoride | $\mathrm{Li}^{+} \mathrm{F}^{-}$ | $\mathrm{LiF}_{(\mathrm{s})}$ |
|  | Sodium hydroxide | $\mathrm{Na}^{+} \mathrm{OH}^{-}$ | $\mathrm{NaOH}_{(\mathrm{aq})}$ |
|  | Niobium (III) chloride | $\mathrm{Nb}^{3+} \mathrm{Cl}^{-}$ | $\mathrm{NbCl}_{3(\mathrm{aq)}}$ |

## Percentage Concentration

concentration $=\frac{\text { quantity of solute }}{\text { quantity of solution }} \times 100 \%$

Types

- \% v/v

Percent by volume

- \% w/w

Percent by weight

## Percent by Volume

$$
C_{v / v}=\frac{V_{\text {solute }}}{V_{\text {solution }}} \times 100 \%
$$

2 L of solution of $5 \% \mathrm{v} / \mathrm{v}$ acetic acid

- What would be the $\mathrm{V}_{\text {solute }}$ ?

$$
\begin{gathered}
C_{\mathrm{CH}_{3} \mathrm{COOH}}=\frac{V_{\text {solute }}}{V_{\text {solution }}} \times 100 \% \\
C_{\mathrm{CH}_{3} \mathrm{COOH}} \div 100 \%=\frac{V_{\text {solute }}}{V_{\text {solution }}} \times 100 \% \div 100 \% \\
\frac{C_{C H_{3} \mathrm{COOH}}}{100 \%} \times V_{\text {solute }}=\frac{V_{\text {solute }}}{V_{\text {solution }}} \times V_{\text {solution }} \\
\frac{\left(C_{C H_{3} \mathrm{COOH}}\right)\left(V_{\text {solution }}\right)}{100 \%}=V_{\text {solute }} \\
V_{\text {solute }}=\frac{(5 \%)(2 L)}{100 \%}=0.1 \mathrm{~L}
\end{gathered}
$$

$C_{w / w}=\frac{m_{\text {solute }}}{m_{\text {solution }}} \times 100 \%$
Eg.

$$
\begin{gathered}
0.11 \% \text { w/w of flouride } \\
m_{\text {solution }}=250 g \\
m_{\text {solute }}=? \\
m_{\text {solute }}=\frac{\left(C_{w / w}\right)\left(m_{\text {solution }}\right)}{100 \%} \\
m_{\text {solute }}=\frac{(0.11 \%)(250 g)}{100 \%}=0.28 g
\end{gathered}
$$

Eg.

$$
\begin{gathered}
m_{\text {solution }}=12.0 \mathrm{~g} \\
0.103 \mathrm{~mol} \text { of } \mathrm{Ag}_{(s)} \\
C=? ? \\
m_{A g}=M n=(107.87 \mathrm{~g})(0.103 \mathrm{~mol})=11.1061 \mathrm{~g} \\
C_{w / \mathrm{w}}=\frac{m_{\text {solute }}}{m_{\text {solution }}} \times 100 \% \\
C_{w / w}=\frac{(11.1061 \mathrm{~g})}{(12.0 \mathrm{~g})} \times 100 \%=92.6 \%
\end{gathered}
$$

Eg.

$$
\begin{gathered}
\text { Sol'n of } \mathrm{HCl}=500 \mathrm{~mL} \\
d=1.50 \mathrm{~g} / \mathrm{mL} \\
n=? \\
m=d V=(1.50 \mathrm{~g} / \mathrm{mL})(500 \mathrm{~mL})=750 \mathrm{~g} \\
n=\frac{\mathrm{m}}{M}=\frac{750 \mathrm{~g}}{36.46 \mathrm{~g} / \mathrm{mol}}=20.6 \mathrm{~mol}
\end{gathered}
$$

## Extra Examples

| 6) $\begin{aligned} & \mathrm{C}_{\mathrm{w} / \mathrm{w}}=25.0 \% \\ & \mathrm{~m}_{\text {soln }}=60.0 \mathrm{~kg} \\ & \mathrm{~m}_{\text {solute }}=? ? \\ & C_{w / w}=\frac{m_{\text {solute }}}{m_{\text {solution }}} \times 100 \% \\ & m_{\text {solute }}=\frac{\left(C_{w / w}\right)\left(m_{\text {solution }}\right)}{100 \%} \\ & m_{\text {solute }}=\frac{(25.0 \% \%)(60.0 \mathrm{~kg})}{100 \%} \\ & m_{\text {solute }}=15.0 \mathrm{~kg}=1.50 \times 10^{4} \mathrm{~g} \end{aligned}$ | $\begin{aligned} & \begin{array}{l} \mathrm{C}_{\mathrm{V} / \mathrm{V}}=70.0 \% \\ \mathrm{~V}_{\text {soln }}= \\ =500 \mathrm{~mL} \\ \quad V_{\text {solute }}=\frac{\left(C_{v / v}\right)\left(V_{\text {solution }}\right)}{1000 /} \\ V_{\text {solute }}=\frac{(70.0 \%)(500 \mathrm{~mL})}{100 \%} \\ \quad V_{\text {solute }}=350 \mathrm{~mL} \end{array} \end{aligned}$ |  |

# Chemistry 20 - Unit 2 - Concentration as a Percent 

Name:
You may find the following formulas useful:

$$
\begin{array}{l|l}
\hline C=\frac{n}{V} & C_{v / v}=\frac{V_{\text {solute }}}{V_{\text {solution }}} \times 100 \% \\
m=M n & C_{w / w}=\frac{M_{\text {solute }}}{m_{\text {solution }}} \times 100 \% \\
d=\frac{m}{V} &
\end{array}
$$

1. Write dissociation formulas for each of the following compounds. Following that, predict the solubility of each compound in water.

| a. Barium chloride | f. Ammonium chlorate |
| :--- | :--- |
| b. Rubidium oxalate | g. Cesium perchlorate |
| c. Strontium sulfate | h. Vanadium (V) carbonate |
| d. Iron (III) hydroxide | i. Lithium phosphate |
| e. Copper (I) fluoride | j. Lead (II) sulfate |

2. Rubbing alcohol, $\mathrm{C}_{3} \mathrm{H}_{7} \mathrm{OH}_{(I)}$, is typically sold in many drugstores as $70.0 \%$ by volume.
a. What volume of pure $\mathrm{C}_{3} \mathrm{H}_{7} \mathrm{OH}_{(1)}$ is present in a 500 mL solution?
b. Under standard conditions, the density of rubbing alcohol is $0.786 \mathrm{~g} / \mathrm{mL}$. How many grams of rubbing alcohol are in a typical bottle?
c. How many moles of rubbing alcohol are in a typical bottle?
3. Hydrogen peroxide is a common disinfectant. Calculate the mass of $\mathrm{H}_{2} \mathrm{O}_{2(\mathrm{aq)}}$ needed to make 1000 bottles of rubbing alcohol if each bottle contains 250 g of solution and the concentration by weight is $3.0 \%$.
4. A typical 355 mL can of Coca-Cola contains 39 g of sucrose, $\mathrm{C}_{12} \mathrm{H}_{22} \mathrm{O}_{11(\mathrm{aq})}$.
a. What chemical amount of sucrose is in a case of 24 cans of Coca-Cola?
b. Under standard conditions, the density of sucrose is $1.59 \mathrm{~g} / \mathrm{mL}$. What is the percentage concentration by volume of sucrose in 1 can of Coca-Cola?
5. A solution of sodium hydroxide has a concentration of $15.0 \%$ by volume.
a. If a beaker contains 425 mL of this solution, what volume of sodium hydroxide is present?
6. A brine solution in a home water-softening system has a salt concentration of $25.0 \%$ by mass. In grams, what mass of salt is dissolved if the tank holds 60.0 kg of solution?
7. A 0.175 kg solution contains 0.470 moles of unknown metal with a $15.0 \%$ concentration by weight.
a. In grams, what mass of metal is dissolved in the solution?
b. What is the most likely identity of the unknown metal?
